

TG80Marker

Tampograf s.a.s., whose pad-printing machines have for many years been leaders in the decoration for the Ophthalmic industry has pleasure in presenting the TG80Marker ideato for the marking of multifocal lenses.

This machine is completely pneumatic, it requires no adjustments, identifies the lens to be printed automatically - left, right or both.

advantage technology 

Here above we see the sequence of the special system of blocking multifocal lenses for any diopter. The exclusive swinging device, is the real tour de force of the TG80Marker; so the lenses

can be positioned particularly, during the procedure of positioning of lenses, thus excluding the most common parallelism error.
